Installation Notes

For users of the Desktop version of OutsideView, uninstall the previous version before installing this release.

If the previous version of OutsideView is an Enterprise 9.0 or earlier client, refer to section 2.7.3 on Major Upgrades in the System Administrators Guide.

Purpose

This update resolves issues and provides customer-requested enhancements, as listed below. For greater detail, consult the 9.1 readme.txt file or contact Crystal Point Technical Support (support@crystalpoint.com).

New Features

- Updated SSH Libraries - Enhanced security and latest ciphers
- Updated Support Libraries - Support newest Windows versions
- Support for Windows 11 - Support newest Windows versions
- Support for Microsoft Server 2022 - Support newest Windows Server versions
- Support for SQL Server 2022 - Support newest SQL Server Versions
- Support in FTP/SFTP for Single-use Passwords - Enhanced security

OutsideView 9.1 Fixes

ID	Title
6555	Change default password for SQL login "ovuser" to make it more complex.
6556	Dynamic Toolbar broken for Tedit.
6577	SFTP EXEC command causes OutsideView to abend if the user logon fails.
6598	OutsideView crashes on startup if the Windows Management Interface is disabled or not running.

Outstanding Issues

- If you are using **single-use passwords** for FTP/SFTP/FTPS file transfers, you cannot mix single-use password sessions with multi-use password sessions in the same OutsideView workspace. If you need to have both session types running at the same time, create a second iteration of OutsideView to segregate them.

About Crystal Point

For thirty-seven years, Crystal Point has been recognized as the worldwide leader in PC-to-host connectivity software for NonStop systems. Crystal Point developed the original Tandem terminal emulator (TTE) and evolved it into its flagship product, OutsideView. OutsideView continues to bring modern connectivity standards to NonStop applications.
