A Useful Feature You May Not Know About

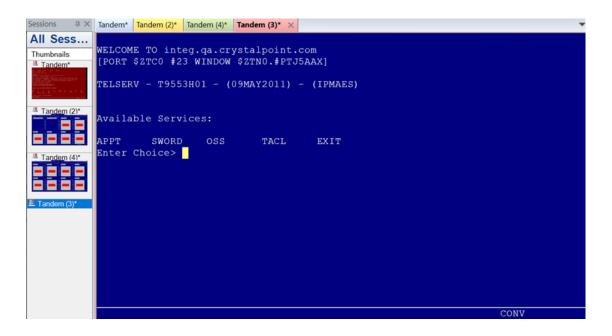

#1 Synchronized Session Bar with Tab Window Display and Smart Docking

The Thumbnails are live and display the same information as a corresponding session (Screenshot 1).

You may work with one of the sessions in full-screen mode and monitor other sessions on a left-side Session Bar (Screenshot 2).

Another option is to have the Session Bar Floating, which allows users to monitor OutsideView sessions while using other applications (Screenshot 3)
